

Technician and Technician Boiler (S Positions):25,000-27,000THB.aa

The mechanic plays a crucial role in inspecting, maintaining, and repairing vehicles and machinery to guarantee their optimal performance and safety.

Key responsibilities encompass:

- Inspection and diagnosis:
- Detect mechanical problems using inspections and diagnostic equipment.
- Repairs and Maintenance:
- Carry out routine maintenance tasks (such as oil changes and part rotations) and repair or replace defective components.
- Documentation:
- Keep precise records of repairs and create service reports.
- Safety Compliance:
- Follow safety regulations and ensure that equipment meets operational standards.

education and certification:

- Higher Vocational Certificate, or an equivalent qualification and above.
- Certification from a technical school or vocational training program in electrical or mechanical repair.
- MSE (Mechanical Service Excellence) certification is an added advantage.

Experience:

- Advanced positions: Over 5 years of experience with specialization in a particular area (e.g., diesel engines, heavy machinery).

Skills:

- Skilled in using mechanical tools and diagnostic equipment.
- Strong problem-solving and troubleshooting skills.
- Good physical endurance for lifting heavy components and working in difficult environments.

Keen attention to detail and outstanding organizational abilities
